ALEXANDRU IOAN CUZA UNIVERSITY of IAȘI

www.uaic.ro

„Alexandru Ioan Cuza“ University of Iași is the oldest higher education institution in Romania. Since 1860, the university has been carrying on a tradition of excellence and innovation in the fields of education and research. With over 26,000 students and 800 academic staff, 15 faculties and almost 200 study programs at Bachelor, Master and Doctoral level, the University enjoys national and international prestige and cooperates with over 250 universities world-wide. Its educational offers are highly diversified, including studies taught in English (mostly at Master and Doctoral level), jointly

achieved in collaboration with partner universities from abroad, as well as courses created in cooperation with the business sector, which offers employment to the best of our graduates.

The product that the PhD researcher creates is not the thesis – vital though that is to their subject area through the creation of original knowledge – no, the product of their study is the development of themselves.

Sir Gareth Roberts

www.uaic.ro/en/studies/doctoral-schools/

Doctoral programs represent the highest level of formal education, which emphasizes on independent research in a specific field, in collaboration with an experienced supervisor and under the guidance of a board which is responsible for running the PhD program. Doctoral programs prepare students for a career in research and/or highly qualified work in a number of professions. They are integrated with high quality research activities.

The overall activities of the Doctoral Schools are coordinated by CSUD (The Council for University Doctoral Studies), that also guides the activity of our Doctoral School Councils (CSD).

To qualify for a PhD program, applicants must hold a Master's degree or a suitable equivalent qualification. They must pass a

selection examination; details regarding the admission procedure can be found at <http://admitere.uaic.ro/doctorat/>. A doctoral degree is awarded after a period of study of at least three years, following the defense of an original doctoral thesis.

Useful information about studying in Romania can be found at www.uaic.ro/en/international/international-students/full-degree-students/

The administrative activities related to PhD studies are carried out by the Department for Doctoral Studies:

doctorat@uaic.ro

There are 13 doctoral schools covering 26 fields.

The Doctoral School of Biology offers high-quality training in a wide range of life sciences areas such as molecular biology, biotechnology, microbiology, botany, zoology, animal and plant physiology. The program covers both theoretical and lab or field approaches and aims to pursue interdisciplinary topics and to develop essential skills for scientific research. Students are involved in research activities and projects together with the Faculty of Biology supervisors and members and also with other research groups belonging to international or national partner institutions. The main goal of the program is to prepare PhD students for a successful life sciences career in basic research or in industry and medicine.

www page: <http://www.chem.uaic.ro/ro/doctorat/>

The Doctoral School of Chemistry, at Alexandru Ioan Cuza University of Iași, through its "curiosity-adventure-surprises" triangle, creates real premises for MSc graduate students to become known philosophers in science, good scientists and well prepared trained personnel for research and other professional careers in chemistry- and environmental-related sciences.

Alexandru Ioan Cuza University of Iași, Romania, runs doctoral program in Chemistry and offers Doctor of Philosophy (PhD) degrees in this research area for innovative, competitive and highly motivated students. Students applying for a doctoral program in Chemistry are expected to complete their PhD in three years.

Existent state-of-the-art equipments, highly involved in studying

various chemical systems' structures and dynamics, beside other facilities offered through the doctoral skills development programme, guarantee to doctoral students the success of a PhD in Chemistry. Integrity, honesty, rigour, transparency, open communication, care and respect principles are highly promoted within the Doctoral School of Chemistry.

Professors with highly standing achievements, with publications in prestigious ISI quoted international journals, are highly committed to ensuring the quality of the doctoral students' research, fulfilling their expectations in professional skills development and employability.

The Doctoral School of Chemistry's PhD Program is a research-oriented educational process supporting scientific training in the field of Analytical/Environmental Chemistry, Inorganic Chemistry and Organic Chemistry/Biochemistry. Within these research areas significant contributions are brought in studying various systems at atomic and molecular level, creating new materials, developing experimental methods and theoretical tools, with the final aim to increase science and society benefits.

The mission of our Doctoral School is to ensure a rigorous and nurturing research environment, in order to enable intellectual and professional development and to contribute to the evolution of the society through advanced research in

various fields of Economics and Business Administration.

The three-year PhD degree program is organized on eight specializations (Accounting, Business Informatics, Cybernetics and Statistics, Economics, Economics and International Affairs, Finance, Management, Marketing), with one core semester - both compulsory and optional courses - which develop fundamental and applied research skills, as well as transversal competencies for integrative approaches and insights. We value open mindedness and honesty, critical thinking and academic rigour, cooperation and interdisciplinarity, proactive behaviors and community engagement.

The Doctoral School of Geosciences of "Alexandru Ioan Cuza" University of Iași is a multidisciplinary research system, in which professors and scientists, having the legal capability to supervise PhD theses and belonging to three different research areas (Geography, Geology, Environmental Sciences), work together with PhD students. Our young scientists have full access to the existing infrastructure and database in the ARHEOINVEST (Interdisciplinary Research in Archaeology) and CERNESIM (Integrated Center for Studies in Environmental Science for Northeast Region). By means of Erasmus or bilateral project funding as well as POSDRU funding, the PhD students may work together with their colleagues and professors from France, Italy, Spain, Germany, Belgium, etc. They have published scientific papers in the best journals and monographs by the most prestigious publishing houses: Springer, Elsevier, Willey, etc.

The Doctoral School of History continues the tradition of teaching and research of BA and Master's studies cycles. The themes proposed by our PhD directors are diverse (Prehistory, Greek and Roman Studies, Medieval Studies, History of Mentalities, International Relationships, History of Communism). The PhD students are directly integrated in Faculty's research, by publications and participation in high-ranked conferences. The main goal of the doctoral studies at the Faculty of History is to encourage valuable research materialized by the defence and publication of our researchers' theses. The main research field of our doctoral school is History and Cultural Studies.

The doctoral studies lead to the achievement of the highest academic degree. At the Faculty of Law, the PhD studies aim at training jurists to become highly skilled, capable of contributing to the development of the science of law.

The PhD programme promotes the development and deepening of thought and juridical analysis, being open to interdisciplinary approach.

With excellent educational opportunities, the Faculty of Law is a reliable partner of the Romanian legal system and aims to actively collaborate with the faculties of law and legal institutions of the European Union.

The PhD program in Mathematics is addressed to MSc graduate students with remarkable scientific background and strong motivation in conducting research activities.

The PhD supervisors are renowned specialists in their fields of expertise. Their research interests cover several modern directions in Mathematics. They have published scientific papers in the best mathematical journals and monographs by the most prestigious publishing houses: Springer Verlag, Kluwer Acad. Publ., Birkhauser, World Scientific, etc. Their scientific results have been cited thousands of times.

The research activity enjoys an important support from the Al. Myller Mathematical Seminar, one of the most complete mathematical libraries in Romania.

Co-founder of the University, the Faculty of Orthodox Theology has been promoting academic relationships with the other faculties of our university as well as with other Theology faculties in Romania and abroad, following the example set by its academic patron, Dumitru Staniloaie, who promoted and cultivated the Romanian Orthodox Theology all over the world. Fully responsible and aware of the role, place and importance of contemporary Romanian Orthodox Theology, the aim of our Faculty is to provide high quality education, deeply rooted in Biblical fundamentals, as it was developed by patristic and post-patristic authors and cultivated by our illustrious predecessors, from a perspective that embraces religious, cultural and scientific dialogue.

The Doctoral School of Physics is one of the oldest in our university, dating from the beginning of 1920. The research results are well known in the scientific world of Physics, not only by publication in journals with high impact factors, but also by titles and diplomas given to some of the members of our research groups by prestigious universities and institutes from Europe and the United States. The great number of important research grants allowed the acquisition of state-of-the-art equipment which constitutes the foundation for the PhD research. There are 5 directions of study: Plasma Physics, Polymer Physics, Optics and Spectroscopy; Biophysics, Medical Physics, Self-organization; Physics of Advanced Materials. Nanotechnologies. Applied Physics; Modeling and Simulation; Theoretical Physics.

In an ever competitive environment, characterized by increasing technological progress and adaptation to new, complex socio-professional realities, psychology research has the opportunity to distinguish itself and to become a competitive area.

The Faculty of Psychology and Education Sciences has embraced the mission to train professionals actively involved in developing the Romanian and European society.

The Doctoral School of Psychology and Educational Sciences is a center of expertise and a skill multiplier in psychological and educational research. Promoters of international research standards, the members of the doctoral school aim at attracting skilled candidates with a clear image on their research future.
