

Apply here

Start date

December 2021

Duration

12 months

Languages

Good spoken and written English levels are required (B2 onwards)

Location

Belfast, Northern Ireland

Belfast is the capital city of Northern Ireland and over recent years has seen a period of significant regeneration and growth. The birthplace of the Titanic, this vibrant city has a buzzing nightlife and social scene with many cultural events taking place throughout the year. Close to beautiful countryside and the famous Giant's Causeway, Belfast has something to suit all tastes.

Benefits

See website for details of all ESPA benefits. For all internships over 6 months, additional benefits will be paid. Details available at interview.

Role

This is a great opportunity for a keen computer scientist, who wants to gain practical experience in software development, for this leader in healthcare informatics and imaging solutions. Mentored throughout, you will assist the Digital and Computational Pathology division in the research and development of key software products. This internship will be a great addition to your CV and boost to your career prospects, along with the satisfaction of knowing that you will be building software to help speed up the diagnosis of patients.

Tasks

- Working as part of a team to research, build and test software applications from initial specification to final deployment and acceptance
- Building test scenarios and acceptance tests
- Automating tests using testing tools and scripts
- Functional, performance and stress testing of the product
- Contribute and participate in technical discussions
- Help maintain test environments
- Track and communicate test results.

Desired Skills

Essential:

- Background in computer science or a related discipline
- Strong knowledge of an Object Orientated language, ideally C# or Java
- Working in a team environment
- Good problem solver

Desirable:

- Experience using an automated end-to-end testing framework
- Experience with MS Azure
- Experience with JavaScript or Python
- Knowledge of the agile programming methodology
- Familiarity with load/stress testing tools such as Apache JMeter

The Host Company

The host company is a leading provider of informatics software and imaging solutions that enhance and speed up the diagnosis of patients. Established in 2010, they are recognised as one of the leading suppliers of laboratory information systems worldwide. Their innovative systems are currently helping to increase efficiency and streamline operations in multiple public and private clinical laboratories across the world. Following a recent acquisition, the host company has added digital pathology education software to its product portfolio and enhanced its digital pathology and artificial intelligence capabilities, further strengthening its position as a leader in the pathology market. The host's vision is to "improve wellbeing through innovation." This vision drives their business and product development activities.
